

COVID-19 VACCINE BOOSTERS

Now Available For
EVERYONE
Recommended by the CDC

California Consortium
for Urban Indian Health

NOVEMBER 2021

What Booster Shots ARE AVAILABLE?

Recently, the FDA has authorized...

- A booster dose of Moderna administered 6 months after completion of original vaccination series.
- A booster dose of Janssen (Johnson & Johnson) administered 2 months after completion of original vaccination series.

In August, the FDA fully approved the Pfizer booster dose to be administered 6 months after completion of original vaccination series.

Who ^{Can Get} Which BOOSTER?

All booster doses* are available to anyone who belongs in one of the following categories:

- Ages 65+
- Ages 18+ who are at high risk of severe COVID-19 infection
- Ages 18+ with frequent exposure to COVID-19 due to employment or living situations

*** The FDA has approved "mixing and matching" of booster shots, meaning you can get any brand of booster shot regardless of the brand of your original vaccine series.**
