

KEEPING YOUR KIDS AND SCHOOLS SAFE DURING COVID-19

Engaging in every safety measure may not be possible, **but some is always better than none!**

#STOPHESPREAD

October 2021

COVID-19 VACCINE

The vaccine is **the best protection against COVID-19**. Your child can get the vaccine if they are age 12 or older.

VENTILLATION & AIR FLOW

Good airflow **helps remove air that may contain the virus** and replaces it with healthy air for your child.

HAND WASHING

Washing hands regularly reduces the amount of germs on hands to **prevent the spread of COVID-19.**

STAYING HOME WHEN SICK

Keep your child home if they feel ill so that they don't potentially get anyone else sick.

MASKS

Masks are simple and very effective. When your child wears a mask, **they are protecting themselves and others** on campus. Masks are required to be worn indoors by K-12 students and teachers.

TESTING

COVID-19 testing can detect the virus even before your child develops symptoms. **Schools have access to free COVID-19 testing thorough the state program for schools.**

CONTACT TRACING

Your child's school or local health department **will always notify parents and teachers** who had close contact with someone on campus who tested positive for COVID-19.
